SUMMARY

Creative technologist with 4.5 years of experience in 3D and product design, working across data and BI analysis, AI-assisted software development and 3D environment art. MA Animation with Merit (University of Salford, UK). In 2026 built six BI case studies in SQL, Python, Power BI and Tableau, one on 36.1M real air-quality readings, each gated by automated data checks, and shipped software in Rust, TypeScript and Python. Self-taught developer using Claude Code; no computer-science degree, work published on GitHub.

SKILLS

Primary skills: SQL (DuckDB), Python (pandas, NumPy, scikit-learn), Power BI (DAX), Tableau, Excel, data modelling, ETL, data validation and reconciliation, web scraping, predictive modelling, data visualisation

Secondary skills (software and AI): Rust, TypeScript, JavaScript, C, Next.js, React, Node.js, Express, Tauri, Svelte, PySide6, Prisma, PostgreSQL, Redis, REST APIs, Git, GitHub Actions, n8n, Ollama, LLM evaluation, Claude Code

Secondary skills (3D and design): Unreal Engine 5 (Lumen, Nanite, Blueprints), Blender (Geometry Nodes, Cycles), Substance Painter, Substance Designer, Adobe Photoshop, After Effects, Premiere Pro, CorelDRAW, WordPress

Languages: Telugu (native), English (C1, IELTS 7.0), Hindi (advanced), Japanese (elementary)

EXPERIENCE

Product and Design Lead, Datatree Systems Jan 2026 – Present

- Building GrafiLabs, a new AI service that creates flyers and social posts for small retailers.
- Own the UI/UX and design language: brand guidelines, a 9-slide pitch deck and the Next.js 15 marketing site (12 industry pages, 48 sample creatives).
- Research markets and target niches and analyse pricing and AI running costs for product fit and business decisions.

Design Associate, Datatree Systems Jun 2023 – Dec 2025

- Designed the company website and handled design for external-facing documents.
- Began advocating for design in company decisions; worked remotely during the MA year.

3D Generalist Intern, Blur'd LLP, Hyderabad, India Jan 2022 – Apr 2023

- Produced 3D visualisation, signage, flyer and packaging designs for client advertising campaigns over 15 months, to brand guidelines; employer certificate cites "exceptional skills and professionalism in 3D Design & Visualisation".

DATA ANALYTICS PROJECTS

India Air Quality BI (real data): Python, DuckDB, SQL, Power BI, Excel Oct 2026

- Built a pipeline over 36.1M valid hourly readings from 107 government stations in six Indian cities with nothing filled in: a 27-month archive gap, mislabelled units and a fault code handled; Power BI and Excel generated from code, 423 of 423 report numbers matching SQL.

SaaS Revenue Leak BI: Python, dbt, DuckDB, scikit-learn, Power BI Oct 2026

- Simulated a B2B SaaS business (1,107 accounts, Oct 2024 to Sep 2026) with five revenue leaks planted and sealed away; a six-detector monitor found 5 of 5 blind on the main run and 19 of 20 across four simulated worlds.
- dbt star schema on DuckDB caught 13 of 13 injected data-problem types; churn model ROC AUC 0.73 out of time; Power BI generated from code, 69 of 69 numbers matching DuckDB.

Hospital Operations BI: Python, DuckDB, SQL, Power BI Oct 2026

- Simulated a 256-bed Hyderabad hospital over three years (168k ER visits) and modelled patient flow, bed occupancy (80.2%) and 30-day readmissions in DuckDB SQL.
- Built a readmission model (logistic regression, ROC AUC 0.786) that beat the clinical LACE score (0.749) on an out-of-time test; its top decile caught 34.9% of readmissions.
- Generated Power BI from code; 63 of 63 numbers matched SQL and 18 of 18 checks caught injected errors.

Supply Chain Network BI: Python, DuckDB, SQL, Tableau Oct 2026

- Simulated an FMCG distributor (4 warehouses, 40 suppliers, 200 products, 36 cities) and measured OTIF (80.2%), lead time, inventory turns and carrying cost.
- Built a 14-day stockout model (gradient boosting, ROC AUC 0.840 vs 0.699 for the reorder-point rule); at the same flag rate it caught 65.6% of stockouts vs 59.5%.

HR Analytics and Personal Finance BI: Python, DuckDB, scikit-learn, Tableau Public, Power BI Oct 2026

- HR: flight-risk model (out-of-time ROC AUC 0.658) and a live Tableau workbook built from code, 20 of 20 matching SQL. Finance: 60 months of bank, card and payroll exports in one ledger, gated by 15 reconciliation checks.

CLIENT PROJECTS

Medical College Data Analysis (freelance client): Python, pandas, BeautifulSoup, Excel Jul 2026

- Collected public filings for 758 Indian medical colleges across two cycles into an Excel dataset (1,031-college registry); MBBS seats reconciled exactly to the published 129,602 and 96 of 96 delivery checks passed.
- Built comparison indicators for every college, such as faculty strength and teaching-hospital beds per MBBS seat, so the client could benchmark institutions against national norms.

St. Savio Education Trust website (freelance client): WordPress, Elementor, Python, PHP Aug 2026

- Built an 18-page NGO site (11 main and 7 programme pages) with GiveWP and Razorpay donations, generating page layouts by script and auditing them against the build spec; WCAG 2.1 AA target.

SOFTWARE PROJECTS

Protec, local-first password manager: Rust, Tauri, Svelte Jun 2026 – Jul 2026

- Built an encrypted local vault (Argon2id, XChaCha20-Poly1305) with optional Windows Hello unlock and a browser extension that autofills over native messaging, with no open network ports.
- Ran a six-area security audit that shipped 16 hardening fixes; about 110 Rust tests; released v0.2.0 on GitHub.

AI Support Triage: n8n, Ollama (local LLM), PowerShell Jul 2026

- Self-hosted an email support desk that routes tickets with a local LLM and drafts knowledge-base replies for human approval, at no recurring cost.
- Built a 40-case labelled evaluation set and promoted AI routing only after it scored 88% vs a 70% keyword baseline.

VOLT Techwear Store: Next.js 15, React, TypeScript, Prisma, PostgreSQL Mar 2026

- Shipped a live storefront with NextAuth accounts, loyalty points, level-gated products, an admin area and a single-transaction server-side checkout.

AI Calendar: React, Node.js, Express Aug 2026

- Built a calendar with a REST API that lets AI assistants check availability, detect conflicts and book events; 177 automated tests (about 96% line coverage) run in GitHub Actions CI.

Additional builds Feb 2026 – Aug 2026

- Obsidian Vault MCP server (TypeScript, read-only, 49 tests, github.com/damanjz/obsidian-vault-mcp); Flux Player (Python, PySide6 native video player); NOCTRA (React Native, Express, Prisma, Razorpay UPI); Umbra (vanilla JS storefront, custom WebGL shader, zero dependencies); portfolio site (Next.js, 18 case studies).

3D ART PROJECTS

Umbraxis, real-time environment: Unreal Engine 5.6 (MA final project) 2025

- Built a semi-stylised medieval village (~10-minute real-time piece) with Lumen, Nanite, day/night cycle and random weather; profiled to ~100 fps against a 60 fps target.

Blender Work: Geometry Nodes, Cycles

- Geometry Nodes generators (castle, medieval city, flock), guitar product looks-dev cut to 9:16 reels, lighting studies; 26 artworks on ArtStation.

EDUCATION

MA Animation (Merit), University of Salford, Manchester, UK Sep 2024 – Sep 2025

- Global Gold Excellence Scholarship (GBP 3,000).

B.Sc. Multimedia and Animation, Loyola Academy, Hyderabad, India 2020 – 2023

- GPA 9.1/10; winner, Inter-College Photography Competition; co-authored dissertation on video editing.

CERTIFICATIONS

IELTS Academic 7.0 (C1), Jul 2023 | C Programming (60 hours), TechLearn Solutions, Jan 2020 | NCC 'A' (Air Wing), 2016
